

Harnessing our Free Life Energy: **Our Environment is our Energy!**

Throughout this article we will speak of natural "Life Energy", meaning the existing natural Living Energy that is uniquely inherent to this planet, that although is known to exist, cannot be weighed, measured or quantified in any conventional scientific manner. We will also refer to a concept called the "Joe Cell", merely as a reference point by way of it being an example of how to harness our Father's freely available Life Energy.

We will also use the word "vacuum" throughout this article, simply referring to the force created within a defined or enclosed space when the contents or portions of the contents of that space are quickly removed or vacated from it.

Typically, we might think of vacuum force as being the by-product of some other preceding expenditure of applied energy, such as electricity in the vacuum-cleaner appliance. There are other ways in which vacuum force can be created. One method is by means of deliberate manipulation of natural Life Energy to create a vacuum. This process of creating vacuum force shall be discussed here, together with a means to positively apply that vacuum force as free, non-polluting "power", to supplement or indeed even replace our reliance upon fossil and other combustible fuel sources.

The famed scientist and researcher, [Wilhelm Reich](#) discussed natural Living Energy with the even more famous Albert Einstein (circa. 1930/40's) while referring to it as "[Orgone](#)". Others have coined names such as "Bion", or referred to it as the "Aura" surrounding a living entity. We shall stick to natural Life Energy for this article. In Reich's discussions, he was able to establish that although his [Orgone](#) energy could not be scientifically measured, it could easily be proven to exist, accumulated and manipulated

to cause benefits for plants, animals and humans in varying degrees.

"[Kirlian](#)" photography has historically been used to photograph the existence of natural Living Energy in virtually every living thing. Most commonly this photography has been used to capture evidence of the "aura" of a living subject, yet it has recently been used to capture photographic evidence of this same field of natural Living Energy as it exists in many inert things such as soil, rocks, sand, and most any other thing that can contain some amount of moisture, including our planet's very unique atmosphere.

All of the scientific research indicates that whatever we call this unique energy, it is in fact the very energy that drives "life" and all living things on this unique planet, including uniquely causing frozen water to float. It is fascinating to consider that when pure water is frozen within an absolute vacuum, it will sink. It floats on this planet due to the existence of natural Life Energy which is naturally attracted to the freezing water molecules, thus causing them to be "lighter" than the unfrozen water molecules in spite of being denser, a phenomenon which we should be eternally grateful for.

Without this unique ability for the frozen water to attract the natural Life Energy and otherwise defy the accepted scientific rules, our freezing climates in certain areas would continually freeze surface waters, sinking them because of their colder and thus denser make-up, then freezing what liquid would rise to the surface, and repeating this until all fresh water on the planet was frozen and life could thereafter not exist. Thankfully the inherent characteristics of natural Living Energy have been pre-programmed to avoid such an occurrence.

Natural Living Energy is naturally attracted to water molecules and to all living cells by virtue of the very design of those

molecules and cells. It may be logically deduced therefore, that this energy must be attracted from "somewhere". Apparently the somewhere, is also the very unique blue atmosphere of this planet as well as most every type of natural, but otherwise inert substances that make up this planet, such as soils, rocks, sand, water, etc., which all have the ability to act as temporary "accumulators" or loosely, temporary storage containers of this natural Living Energy.

This also appears to be the same "where" from which we are able to "accumulate" it in certain artificial devices. Science has accepted that when we specifically design the shape of a "space" within specific objects made from specific materials, we can attract and accumulate concentrations of natural Living Energy within that space, in much the same manner as water molecules or living cells accumulate it. Examples of this artificial design would be such devices as Reich's "Orgone Accumulators", or the Australian's "Joe Cells" used by many to power automotive engines without any known source or consumption of "fuel".

Powering an automotive engine with natural Life energy is where we come back to the vacuum and where we will formally introduce the concept of the "Joe Cell". We will not go into the specific details of how a Joe Cell is alleged to work within this article, except to refer to it's design properties to the extent they relate to this material. More information may be obtained regarding the Joe Cell from any number of web-sites, including: [Joe Cell Energy](#), or [JoeCell Energy - Home](#).

A closing thought with regard to our brief description of natural Living Energy would be that it's supply may be compared to that of water. There is the same amount of water on this planet today as there was five thousand years ago - right down to the last drop. We do not, nor can we, through consumption or use of

water, actually destroy or eliminate any quantity of water - we can only contaminate it, or temporarily change it's form or location. The same applies to natural Living Energy. We do not through the act of living, nor can we, actually destroy or eliminate any quantity of the naturally existing Living Energy. Plants and animals can only temporarily use or access it's form and power to sustain their temporal lives. Thus there is the same amount of natural Living Energy on this planet today as there was five thousand years ago, it is simply manifest in different temporal life forms at this moment in time.

We will start on the *Joe Cell*, by stating that we strongly disagree with the idea that by using a *Joe Cell* on a conventional auto engine, we are somehow harnessing this natural Living Energy (*a.k.a. "Orgone"*) in any form of "[implosion](#)" as most *Joe Cell* proponents tend to believe. An implosion is essentially just as destructive, if not more destructive than an explosion when you fully grasp the mechanics of the event, and we do not think for one moment that we have been granted the authority or ability to deliberately or accidentally "destroy" or eliminate any of our Creator's natural Living Energy by imploding it, thus the effect we are witnessing in the *Joe Cell* equipped engines, must be something else.

We believe the explanation for the observable effect of the *Joe Cell* on an engine is quite simple. When enough natural Life Energy is present in a normal automotive style engine, that engine will start to run rough until two things happen; first, the timing must be adjusted to eliminate any spark on the "compression" or power stroke, and second, the conventional fuel supply must be cut off. Each of these actions eliminates an explosive or destructive potential. But there is one more aspect of a conventional engine that is also the cause of a minor "destructive" event, which is the "compression" stroke.

The very act of "compression" of the otherwise natural atmospheric pressure is contrary to the natural design of the atmosphere and could therefore be termed destructive (*less so than the combustion, but still..*). By simple process of elimination it becomes rather obvious that when natural Living Energy is accumulated in the *Joe Cell* and then directed into the engine block, it naturally looks for, or seeks a way to escape the unnatural environment of the engine, and get back to its more natural atmospheric environment. It does this through the path of least resistance – the open air channel within the exhaust system. In other words it's easiest escape route while the engine is running, is to follow the air flow as opposed to passing through any "physical" parts of the engine.

Thus, for all intents and purposes, once the engine is running and normal atmospheric air is being drawn into the intake chamber, it may reasonably be deduced that very little of the artificially accumulated Life Energy is in the intake area, only some small amount which inadvertently migrates through the actual metal components in that direction. Most of the accumulated Life Energy, once directed toward the running engine (*from the Joe Cell accumulator*) would take the escape path of least resistance through the exhaust chamber and out the exhaust pipe. The small amount that inadvertently migrates into the combustion chamber is simply what causes the car to run rough until the "explosive" or destructive effects are stopped by eliminating any spark or any fuel to that area.

Failing to eliminate the spark or the fuel to an engine equipped with a *Joe Cell* causes an extremely rough running engine. This rough running phenomenon of *Joe Cell* equipped engines, is simply the natural Living Energy being manipulated into an environment where it is subsequently forced to "escape" immediately before the destructive forces of combustion can

take effect within the combustion chamber. When it escapes these potentially destructive forces during a normally fuelled power stroke for example, it creates a vacuum force in it's wake within the concurrently occurring combustion action, which offsets those concurrent explosive forces, thus generating the appearance of a rough running engine.

The only reason the "spark" that is now set to occur at the bottom of the piston stroke seems to have any effect at all on the engine, is because the natural Living Energy is simply (*and also*) escaping the proximity of that "spark". It also escapes that potential damaging energy very quickly - literally immediately, out through the open exhaust ports, and in fact so quickly, that it creates a vacuum in its wake. It is this extremely intense vacuum caused by the natural Living Energy escaping from these potentially harmful destructive actions such as the combustion, the advanced spark, or the compression, that causes the engine to continue running after the fuel source is cut off, not the equally destructive "implosion" of the natural Living Energy, or "Orgone" as many would erroneously claim.

Basically powering an automotive type engine with a *Joe Cell* could be summed up as follows: "We are artificially accumulating natural Living Energy and deliberately manipulating it by directing it into a potentially destructive environment called an automobile engine. Because true Natural Living Energy cannot be destroyed, (*and we believe cannot be reduced, eliminated or even damaged*) it must therefore immediately vacate the vicinity of any potential destructive forces such as combustion with the fuel, or proximity to the spark, or even simple compression. By vacating from the premises of these potential destructive forces at incredible velocities – precisely concurrent with any such destructive occurrence, vacuum force is created within the

combustion chamber resulting in the effect of what we typically refer to as "power" from the engine."

When asked to explain why the natural Living Energy that is in proximity of the explosive combustion is not damaged in that explosive combustion of the fuels before the supply is turned off, or why it is not damaged by the spark, or by the simple compression, we believe the answer is also simple and straight forward. We do not purport that the natural Living Energy "thinks", or is capable of taking evasive action to avoid these destructive forces, rather it simply moves out of the path of any destruction automatically as it was pre-programmed to do, and concurrently with any such destructive force.

Vacating the vicinity of destructive forces "concurrent" with those destructive forces without being captive or subject to those destructive forces may be further explained as it relates to relativity. The time element of the destructive action is relative to the motion of the natural Living Energy, such that it's complete and successful escape is imminent. Simply compare it to the example of a train traveling northbound on it's tracks at sixty miles an hour toward a bullet fired southerly at the oncoming train and traveling at roughly three thousand feet per second. The bullet hits the train without penetrating and immediately and concurrently changes directions without actually "stopping" as we understand the word.

In other words, if the bullet was to have stopped in order to reverse directions at impact with the train, then the train would have had to stop at the same time.

Since we know the train did not stop or even slow down in it's northerly motion upon impact with the bullet, then the actual directional motion of the bullet is relative to the point in time that we attempt to measure, or pinpoint it's location. The bullet never truly stops moving. This is the same phenomenon that occurs with the natural Living Energy. While it is indeed present concurrent with the components of destructive combustion, it is able to escape from the premises of that destructive combustion concurrent with it's occurrence and free, or independent of any involvement in that destructive combustion. At any given point in time, the natural Living Energy is outside of the sphere of any destructive combustion, notwithstanding it may also be concurrently contiguous to that same destructive combustion.

The operation of an automotive engine with a *Joe Cell* can now be reconciled to a better comprehension of what is really happening. This explanation also negates any misconceptions that we human beings would ever be able to implode or otherwise destroy even some little portion of the natural Living Energy that sustains life on this planet - that most arrogant notion is just not acceptable.
